NATURE'S MACE PROFESSIONAL

BEFORE USING: Wear eye protection, and protective clothing/gloves before applying. Due to the strong percentage of ingredients; skin, eye and respiratory tract irritant may occur from prolonged or repeated exposures. Wash after use. Not for use on food or feed crops. This product is intended for use only as a barrier repellent applied as a perimeter around vegetation as directed. Do not apply directly to water, open waterways or streams.

MOLE APPLICATION Our Mole & Vole Granular Repellent's natural-based active ingredients repel moles by providing an unpleasant taste and smell to their surrounding areas. These changes to their environment drives them out of treated areas. **IMPORTANT: DETERMINE WHICH DIRECTION YOU WANT THE MOLES TO LEAVE!** The objective is to push to moles back to where they first entered. The amount of visible damage will show the entry/exit point.

RESIDENTIAL APPLICATIONS

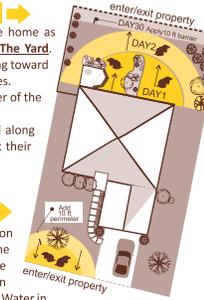

Decide which direction you want to force them to an exit point off property.
APPLY Nature's Mace Pro Granular using a broadcast spreader at 60% Open. For specific brand of Spreader, see golf chart.

If damage is CLOSE TO THE HOME

DAY 1: Apply starting as close to the home as possible and cover the **First Half Of The Yard.** This will force the moles to start moving toward the exit location. Water in for 20 minutes.
DAY 3: Finish applying to the remainder of the yard. Water in for 20 minutes.
DAY 30: Apply 10 ft. perimeter band along the property line exit area to prevent their return. Water in for 20 minutes.

If damage is IN YARD, BUT NOT CLOSE TO THE HOME.

DAY 1: Form a half moon application starting 10 feet beyond the end of the runs and the damaged area. Cover the entire area (including the half moon application) all the way to the exit line. Water in for 20 minutes to activate, allowing it to soak into the soil, where worms are.
DAY 5: Repeat by applying again to same area and water in.
DAY 30: Apply 10 foot band at property line exit to prevent return. Water in.

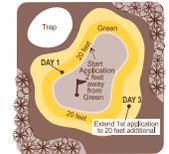

GOLF COURSE APPLICATIONS

BEFORE APPLYING: Set Spreader based on the settings below OR adjust to 60% OPEN.

Recommended Settings will give 1 lb/650 sq. ft.

| SPREADER TYPE | Quaker Broadcast | 14 |
|-----------------------|------------------|--------------------|
| Earthway Broadcast | 25 | Red Devil |
| EZ Broadcast Republic | 15 | Scott Easy Green |
| Lesco | 18 | Scott Speedy Green |
| | 14 | |

TO TREAT GREENS:

DAY 1: Apply around the Greens **STARTING 2 feet from the edge of the green**, extend the application 20 feet away. Water in for 20 minutes. (This will start the moles moving away from the green).
DAY 3: Extend the application another 20 feet and water in for 20 minutes.
DAY 30: Apply a preventative barrier Only on the "Day 3 applied area". Water in for 20 minutes.

TO TREAT TEE AREAS

DAY 1: Apply repellent to entire tee extending 3 feet off of the mowed tee area. Water in for 20 minutes.
DAY 3: Apply to the sides of the tees at least 20 feet from the teeing area. Water in for 20 minutes.
DAY 30: Apply a preventative barrier ONLY to "Day 3 applied area". Water in for 20 minutes.

VOLE APPLICATION

Although voles are active all year, they cause the most damage in winter. They feed above and below the ground on plant parts. They ruin lawns, turf and ground cover including damaging runways/tunnels throughout the property. NM Professional Granular safely and naturally stops vole infestation when used as directed. **APPLY starting in Mid-October and repeat application before first snowfall** to prevent voles from entering property. Additionally, treat areas with a history of drifting and deep snow. If vole damage is present, follow these steps.

BEFORE APPLYING: Set Spreader based on the settings at right OR adjust to 65% OPEN.

STEP 1: Scoop by hand, Nature's Mace Pro Granular in beds, mulch or rough grass, visibly enough to see.
STEP 2: Apply a 10" wide band around the perimeter heavy enough to be visibly seen. Sprinkle around and in-between plant groups. **DO NOT WATER IN.** Voles rely on seedlings & eat primarily surface to just below.

Recommended Settings will give 1 lb/600 sq. ft.

| SPREADER TYPE | Quaker Broadcast | 18 |
|-----------------------|------------------|--------------------|
| Earthway Broadcast | 28 | Red Devil |
| EZ Broadcast Republic | 19 | Scott Easy Green |
| Lesco | 22 | Scott Speedy Green |
| | 18 | |

GENERAL APPLICATION: Apply 2 applications, 2 weeks apart to areas that are showing vole damage. Repeat again 30 days after second application. **Spring Application:** As snow melts, voles start looking for high grass areas to begin eating. Apply to those areas as it melts.

FREQUENCY OF USE

Nature's Mace Professional should be reapplied every 40-60 days depending on weather conditions. For questions, contact our Professional Division Website for technical support at naturemaceprofessional.com

naturemaceprofessional.com

PROUDLY MADE IN THE USA

PRECAUTIONARY STATEMENTS: Keep out of reach of children. **FIRST AID:** Wash skin after use. Avoid contact with eyes or cuts. If in eyes, flush with water 15-20 minutes, if irritation persists, seek immediate medical attention for treatment. **STORAGE:** Store in original sealed container. **Store At Room Temperature.** Store away from direct sunlight or excessive heat. Do not contaminate water by storage or disposal. **DISPOSAL:** Do not reuse empty container. Dispose of properly as required by law. Buyer assumes all responsibility for safety and use not in accordance with directions. Nature's Mace represents that this product is exempt from EPA Registration under Section 25(b) of FIFRA and has not been registered by the EPA. Packaged by Weight not Volume. Settling may occur due to shipping & handling.

NATURE'S MACE PROFESSIONAL

NM Professional Granular Deer Repellent's active ingredients trigger a deers' fear by association and repels them before they begin browsing. For activity already in place, NM Professional Deer formula makes their food repulsive to taste, thus training them to stay away. It does not require rotation with other repellents to be effective.

Peak application times occur during early **spring/summer**; and in dry zones where irrigation is used. **Apply as a preventative to protect spring seedlings and sprouts before blooms start. Fall:** Deer target young trees, bushes, and ornamentals (their main food in the fall) during the fall rutting season. **Winter,** diets change to evergreens and ornamentals. Apply before and then on top of snow cover. Not for use on food or feed crops. This product is intended for use only as a barrier repellent applied as a perimeter around vegetation as directed. Do not apply directly to water.

BEFORE USING: Wear eye protection, and protective clothing/gloves before applying. Due to the strong percentage of ingredients; skin, eye and respiratory tract irritant may occur from prolonged or repeated exposures. Wash after use.

DEER APPLICATION

STEP 1: DETERMINE THE PERIMETERS of the landscaped areas in which you want to protect. Calculate the total linear feet of application. (Measure the length in inches and then divide the total number of inches by 12 to convert to feet. Multiply total lengths x 1.67 (for 20" band)

STEP 2: APPLY Nature's Mace Professional Granular using a Scoop. Do not use a broadcast spreader as this will **not effectively control** the band strip amount properly.

GENERAL APPLICATION: Starting 18" away from the edge of the landscaped area; (flowerbeds, landscapes, ornamentals, gardens, ground cover in danger of animal browsing); Apply a 20" wide band around the perimeter heavy enough to be visibly seen. Sprinkle around and in-between plant groups.

FOR LARGER AREAS or PLOTS: Again, starting at 18" from edge, we suggest increasing the 20" wide band to a 24" band and increasing the application amount. Then apply interior 18" strips within the protected area, spaced about 25-30 feet apart.

LOCATE DEER ENTRY POINT OF THE PROPERTY: Apply 2 (two) 20" strips across the deer path, 5 feet apart.

FREQUENCY OF USE

Re-Application Recommendations: NM Professional Granular Deer Repellent will last approximately 40-60 days. While our NM Professional Granulars do not wash off in normal rainfall or irrigation, it should be lightly reapplied immediately following periods of heavy downpour or consistent rainfall.

Nature's Mace Professional should be reapplied every 40-60 days depending on weather conditions. For questions, contact our Professional Division Website for technical support at naturemaceprofessional.com

NATURE'S MACE PROFESSIONAL

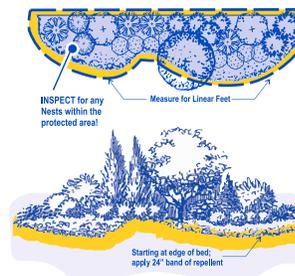

NM Professional Granular Rabbit Repellent's active ingredients do not require rotation with other repellents to be effective. Our formula naturally triggers a rabbit's fear by association and repels them before they begin browsing.

All Season Use. Protect spring green growth with early application and reapply during summer. In winter, apply before and then on top of snow cover. Not for use on food or feed crops. This product is intended for use only as a barrier repellent applied as a perimeter around vegetation as directed. Do not apply directly to water.

BEFORE USING: Wear eye protection, and protective clothing/gloves before applying. Due to the strong percentage of ingredients; skin, eye and respiratory tract irritant may occur from prolonged or repeated exposures. Wash after use.

RABBIT APPLICATION

STEP 1: INSPECT & MEASURE AREAS that are affected by rabbit damage. Calculate the total linear feet of application. (Measure the length in inches and then divide the total number of inches by 12 to convert to feet. Multiply total lengths x 2 (for 24" band).

BEFORE APPLICATION: It is very important that you make sure the rabbits and signs of any nests are flushed out before application. You do not want them trapped inside.

STEP 2: APPLY Nature's Mace Professional Granular using a Scoop. Avoid using a broadcast spreader, as it will not effectively control the band strip amount properly.

GENERAL APPLICATION: Starting at the very edge of the flower beds, plants in danger of rabbit nibbling; apply a 24" wide band around the perimeter heavy enough to be visibly seen.

FREQUENCY OF USE

Re-application Recommendations: NM Professional Granular Rabbit Repellent will last approximately 40-60 days. While our NM Professional Granulars do not wash off in normal rainfall or irrigation, it should be lightly reapplied immediately following periods of heavy downpour or consistent rainfall.

NATURE'S MACE PROFESSIONAL

BEFORE USING: Wear eye protection, and protective clothing/gloves before applying. Due to the strong percentage of ingredients; skin, eye and respiratory tract irritant may occur from prolonged or repeated exposures. Wash after use. Not for use on food or feed crops. This product is intended for use only as a barrier repellent applied as a perimeter around vegetation as directed. Do not apply directly to water, open waterways or streams.

NM Pro Snake & Iguana Repellent offers a double preventative. With 2 key ingredients it works by affecting their Jacobson Organ sensor (their tongue); and is also a contact repellent by irritating their skin.

ALL SEASON USE & works on ALL TYPES of snakes found in the USA.

INSPECT BEFORE APPLICATION! It is important to get the snakes out first, then apply around the outside to stop them from returning. **AVOID CONTACT** in handling of snakes if you are unfamiliar with species & their proper handling. The quick checklist shows likely places snakes may be found; in addition to the property owners visual observance.

LIKELY PLACES OF SNAKE INFESTATION

- Around piles of stones, pavers & around foundations of structures
- Cluttered basements & attics
- Crawlspace under house
- Fast storage areas in barn & hay lots where rodents abound
- Firewood stacked directly on the ground
- Gardens & flowerbeds with heavy mulch
- Old lumber or junk piles
- Pond & stream banks with abundant debris & trash
- Near Pools, Lanai, Decks
- Unmowed & unkempt lawns, abandoned lots & fields with tall vegetation
- Untimmed shrubs & shrubs growing next to a foundation

SNAKE APPLICATION

APPLY Nature's Mace Professional Granular using a Scoop. Avoid using a broadcast spreader, as it does not effectively control the band strip amount properly.

DAY 1: Apply 20-inch bands next to buildings, homes, playgrounds, and other areas to keep snakes from entering.

DAY 30: Reapply in 30 days to continue to keep them away. You can also apply 3 foot bands at the perimeter of the property.

FOR HARD TO REACH AREAS SUCH AS UNDER PORCHES, DECKS AND CRAWL SPACES, PUT PRODUCT IN SMALL POUCHES.

- 1) Put NM Pro Snake & Iguana Repellent into several 6-8 little pouches more than a golf ball size amount in each pouch.
- 2) Throw or drop several pouches in the center area where the snakes could be nesting.
- 3) Snakes should start clearing out from under this area quickly.
- 4) Once you are certain they are gone, apply a 24-inch band around the perimeter and/or the area where they are going in and out.

Pouches available upon request.

NM Pro Repellent does not eradicate pests but helps to control and exclude them on a local scale. Our formula is a double preventative that affects iguana's senses as well as an irritant to their skin. This product is also found to be effective on geckos and lizards too. **APPLY NM Professional Granular** using a scoop.

IGUANA APPLICATION

GENERAL APPLICATION: Form a border 12-inches away from edge of bed; sprinkle a 20-inch band around flowerbeds and gardens. Apply heavy enough to see visibly.

TREES: Apply 3 foot ring around the base of trees to prevent them from climbing to get to any vegetation.

NM Pro granular Snake & Iguana Repellent may be applied to inside open-air hotels and office buildings where iguanas roam and eat landscapes and plants. **Apply directly inside of beds and/or planted flowers.**

Apply a 20-inch perimeter band around pool areas, gazebos, lanai and sunrooms.

Apply a 20-inch band around porches that have decorative planted pots and landscaped areas.

Iguanas graze on flowers (love hibiscus & orchids), shrubs, and warm climate vegetation. They typically nest around sidewalks, sea walls and building foundations. **Be sure to inspect these areas for any activity.**

FREQUENCY OF USE

Re-Application Recommendations: NM Professional Granular Snake & Iguana Repellent will last approximately 40-60 days. While our NM Professional Granulars do not wash off in normal rainfall or irrigation, it should be lightly reapplied immediately following periods of heavy downpour or consistent rainfall.
