

NM Professional Granular Deer Repellent active ingredients trigger a deers' fear by association and repels them before they begin browsing. For activity already in place, NM Professional Deer formula makes their food repulsive to taste, thus training them to stay away. It does not require rotation with other repellents to be effective.

Peak application times occur during early **spring/summer**; and in dry zones where irrigation is used. **Apply as a preventative to protect spring** seedlings and sprouts before blooms start. For the **fall season**: protect flowers & vegetables such as mums, berries, pumpkins, cotton, grapes, etc. In **winter**, diets change to evergreens and ornamental shrubs. Apply before and then on top of snow cover.

Re-Application Recommendations: Nature's Mace Professional Deer Repellent will last approximately 40-60 days including normal rainfall or irrigation. While NMPro Deer does not wash off in rain, it should be lightly reapplied immediately following periods of heavy downpour or consistent rainfall.

DEER APPLICATION

STEP 1: DETERMINE THE PERIMETERS OF THE LANDSCAPED AREAS in which you want to protect. Calculate the total linear feet of application. (Measure the length in inches and then divide the total number of inches by 12 to convert to feet. Multiply total lengths x 1.67 (for 20" band)

STEP 2: APPLY Nature's Mace Professional Granular using a Scoop. Using a broadcast spreader will **not effectively control** the band strip amount properly.

GENERAL APPLICATION: Starting 18" away from the edge of the landscaped area; (flowerbeds, landscapes, ornamentals, gardens, ground cover, & edibles in danger of animal browsing); Apply a 20" wide band around the perimeter heavy enough to be visibly seen. Sprinkle around and in-between plant groups.

FOR LARGER AREAS or PLOTS: Again, starting at 18" from edge, we suggest you increasing the 20" wide band to a 24" increasing the application amount. Then apply interior 18" strips within the protected area, spaced about 25-30 feet apart.

LOCATE DEER ENTRY POINT OF THE PROPERTY: Apply 2 (two) 20" strips across the deer path, 5 feet apart.

FREQUENCY OF USE

Nature's Mace Professional should be reapplied every 40-60 days depending on weather conditions. For questions, contact our Professional Division Website for technical support at naturesmaceprofessional.com

NM PROFESSIONAL LINE OFFERS
LIQUID & GRANULAR REPELLENTS FOR
