

FACT SHEET

EPA Reg. No. 524-534

Certainty® Turf Herbicide Measuring Scoop Use Directions

Hand-held, backpack and other similar-type sprayers may be used to apply this product. Apply to foliage of vegetation to be controlled.

All applications should be made at 2 gallons of spray solution per 1000 square feet. Do not spray to the point of runoff. Spray coverage should be uniform and complete.

Using the **SMALL SCOOP** (0.16-gram scoop) provided, refer to the following table for the **Number of Scoops** of product required to achieve the **Desired Application Rate** when mixed in 2 gallons of water.

Desired Application Rate (ounces of product / acre)	Number of Scoops Small scoop (0.16-gram/scoop)	Volume of water (gallons)	Spray Volume (gallons/1000 ft ²)
0.75	3	2.0	2
1.00	4	2.0	2
1.25	5	2.0	2

Using the **LARGE SCOOP** (0.8-gram scoop) provided, refer to the following table for the appropriate **Number of Scoops** and **Volume of Water** required to achieve the **Desired Application Rate**.

Desired Application Rate (ounces of product / acre)	Number of Scoops Large scoop (0.8-gram/scoop)	Volume of water (gallons)	Spray volume (gallons/1000 ft ²)
1.00	1	2.5	2
1.25	1	2.0	2
2.0	2	2.5	2

Add 2 teaspoons (1/3 fluid ounce or 10 milliliters) of non-ionic surfactant per gallon of water.

Ensure the product is measured as a level scoop and is not rounded.

Always read and follow label directions. The applicable labeling for all products must be in the possession of the user at the time of herbicide application. It is a violation of federal law to use any registered pesticide product in a manner inconsistent with its labeling. The recommendation in this Fact Sheet is a labeled application and is based on the current Certainty Turf herbicide label.
