1. Product Description

ORNAMEC[®] is a selective postemergence herbicide for control of annual and perennial grass weeds. ORNAMEC does not control broadleaf weeds or sedges (nutgrass).

Control Symptoms - ORNAMEC is a systemic herbicide which moves from the treated foliage into the shoots, roots, rhizomes, stolons, and growing points (meristematic regions) of treated grass weeds. Excellent control of a wide range of annual and perennial grass weeds will be obtained with ORNAMEC when applied as directed on this label.

Growth of treated grass weeds stops soon after application. Symptoms include loss of vigor, yellowing and/or reddening, and eventual death to

the treated grass plant. Symptoms are generally observed within one to three weeks, depending on grass weed species and environmental conditions.

ORNAMEC can be used to control grass weeds in many newly transplanted and established ornamentals, trees, shrubs and groundcovers in noncrop areas. See the following Tables 5 through 8 for specific uses.

Application of ORNAMEC may be made over-the-top to ornamentals listed in Table 5. Over-the-top applications are defined as spray patterns delivered to the upper portions of the established ornamentals and target weeds. Use sufficient spray volumes to ensure a uniform distribution and complete spray coverage of the target weeds. Plants listed in Tables 6 through 8 should have a directed spray applied to prevent contact of spray with foliage. Directed spray applications are defined as spray patterns aimed or directed toward the lower portion of the established ornamentals, and this method of application will minimize the phytotoxicity of the desired species. If the growth habit of the plant or other factors do not allow a directed spray, an over-the-top application can be made to plants in Table 6 through 8; however, there is the possibility of damage in the range listed for each table when applied at label rates. Do not apply to ornamentals that may be harvested for food within one year after application. Do not apply this product through any type of irrigation system.

NOTICE TO BUYER AND USER: It is impossible to test every species and variety or cultivar of ornamental or nursery plants under all conditions. Plant tolerance of pesticides vary as conditions vary. Plant tolerance of ORNAMEC at label rates has been found to be acceptable within the ranges specified for the indicated genera and species. Neither the manufacturer nor the seller has determined whether or not ORNAMEC can safely be used on plants not specified on this label. The professional user should determine if ORNAMEC can be used safely prior to use.

2. Annual and Perennial Grass Control in Ornamentals, Nurseries, and Landscaping Not for use in vegetable gardens or on fruit-bearing trees and shrubs intended for consumption.

Spray to obtain thorough coverage of grass foliage, but not to the point of runoff. Do not apply ORNAMEC if rainfall is expected within 1 hour. Repeat treatments may be necessary to provide full season control. Apply ORNAMEC to actively growing grasses before they exceed the growth stages specified in Tables 3 and 4. Apply ORNAMEC when the first grass species in a mixed grass weed population reaches the specified growth stage for treatment.

Do not apply the herbicide to grasses which are stressed due to moisture, temperature, low soil fertility, mechanical or chemical injury. Do not apply to grasses which have exceeded the specified growth stages (See Tables 3 and 4).

BROADCAST TREATMENTS: Use 64 to 96 fl.oz. of ORNAMEC to 20 to 40 gallons of water per acre (1.5 to 2.2 fl.oz./1000 sq.ft.). Always add a nonionic surfactant containing at least 75% surface wetting agent (such as AquaZorb[®] CA) at 0.25% vol./vol. (8 fl.oz. per 25 gallons) of finished spray volume. To control perennial grasses, use 96 fl.oz. of ORNAMEC per acre per application and multiple applications will be needed.

SPOT TREATMENTS: Mix ORNAMEC and only a nonionic surfactant (such as AquaZorb CA) with 1 gallon of water per 1,000 square feet according to the amounts shown below. Spray to obtain thorough coverage, but do not spray to the point of runoff. Retreat if necessary.

To Make This	Add These Amounts		
Spray Volume	ORNAMEC	Nonionic Surfactant	
1 gallon	2.5 fl.oz. (5 Tbs)	0.3 fl.oz.	
10 gallon	26 fl.oz.	3 fl.oz.	
25 gallon	64 fl.oz.	8 fl.oz.	
50 gallon	128 fl.oz.	16 fl.oz.	

3. Bermudagrass Control In Zoysiagrass and Tall Fescue Turf

ORNAMEC may be used to suppress and eventually control some undesirable grasses in turf areas. To control common bermudagrass and hybrid bermudagrass, follow the directions below:

Note: The application of this product may show slight discoloration to the desirable turfgrass. Symptoms are temporary and discoloration will subside. Do not apply to tall fescue turf unless injury can be tolerated. Weather and cultural treatments can also affect applications.

3.1 Bermudagrass Control in Zoysiagrass

Late Spring: For broadcast applications, use 12 to 16 fl.oz. of this product in 20 to 40 gallons of water per acre (0.3 to 0.4 fl.oz/1000 sq.ft.) with a nonionic surfactant (such as AquaZorb CA). This application should be made once bermudagrass is fully green and retreated if necessary. Retreat in 14 to 21 days if regrowth occurs. For spot treatments, use 0.3 fluid ounce (2 teaspoons) of this product and 0.3 fluid ounce (2 teaspoons) of nonionic surfactant (such as AquaZorb CA) in one gallon of water to treat 1,000 square feet.

Mid Summer: During hot summer weather, apply 16 to 20 fl.oz. of product per acre (0.4 to 0.5 fl.oz/1000 sq.ft.) with a nonionic surfactant (such as AquaZorb CA). For spot treatments, use 0.4 fluid ounces (2.5 teaspoons) of this product and 0.3 fluid ounce (2 teaspoons) of nonionic surfactant (such as AquaZorb CA) in one gallon of water to treat 1,000 square feet. **Note:** The 20 fluid ounce rate may cause temporary turf discoloration.

Late Summer: When bermudagrass is preparing for dormancy, apply 8 to 12 fl.oz. of this product per acre (0.2 fl.oz to 0.3 fl.oz./1000 sq.ft.) with a nonionic surfactant (such as AquaZorb CA). For spot treatments, use 0.25 fluid ounces (1.5 teaspoons) of this product with 0.3 fluid ounce (2 teaspoons) of nonionic surfactant (such as AquaZorb CA) in one gallon of water to treat 1,000 square feet.

3.2 Bermudagrass Control in Tall Fescue

For spot treatments of tall fescue with hand-operated sprayers: Make applications in the spring and fall. Start applications after bermudagrass is fully green. Repeat in 14 to 21 day intervals if regrowth occurs. Complete control may take 1 to 2 growing seasons. Use hand-operated sprayers (backpack sprayers, compression or pump-up sprayers, or tank type sprayers). Add 0.5 fl.oz. of product with 0.3 fl.oz. of nonionic surfactant [such as AquaZorb CA) per 1 gallon of water to treat 1,000 sq.ft. of turf.

For broadcast treatment of tall fescue: For broadcast applications, use 17 to 21 fl.oz. of product in 20 to 40 gallons of water per acre (0.4-0.5 fl.oz./1000 sq.ft.) with a nonionic surfactant (such as AquaZorb CA). This application should be made once bermudagrass is fully green and retreated if necessary. Retreat in 14 to 21 days if regrowth occurs. Complete control may take 1 to 2 growing seasons.

Take care with applications to tall fescue during the summer months (July and August). Avoid applications to tall fescue under stress due to drought, temperature extremes, or chemical injury.

Allow time (up to 24 hours) for this product to be absorbed and translocated before mowing the treated area. Wait 14 days before re-seeding treated areas of tall fescue.

Note: The application of this product may show slight discoloration to the desirable turfgrass. Symptoms are temporary and discoloration will subside. Do not apply to tall fescue turf unless injury can be tolerated. Weather and cultural treatments can also affect applications.

4. Dallisgrass Control in Tall Fescue

Make a single application of ORNAMEC at 24 fl.oz. per acre (0.6 fl.oz/1000 sq.ft.) in 20 to 40 gallons of water per acre to control dallisgrass in tall fescue turf in the spring. Add a non-ionic surfactant (such as AquaZorb CA) at 0.25% v/v (0.3 fl.oz. or 2 teaspoons per gallon of spray mix) to improve efficacy.

For spot treatment applications, mix 0.6 fl.oz. of ORNAMEC plus 1/3 fl.oz. of a non-ionic surfactant (such as AquaZorb CA) per one gallon of water to treat 1,000 square feet.

Note: The application of this product to tall fescue turf may show slight discoloration. Symptoms are temporary and discoloration will subside. Do not apply to tall fescue turf unless injury can be tolerated. Weather and cultural treatments can also affect applications. Use a minimum spray volume of 30 gallons of water per acre.

Application timing is critical and is determined by Growing Degree Days (GDD). GDD units are determined by the following calculation:

 $\frac{\text{Max daily temp (in °F) + Minimum daily temp (in °F) - 50°F}}{2} = \text{GDD}$

If the calculation is zero or a negative number, it is ignored. Add each day's GDD units beginning on January 1st. When your total reaches 270 to 360 GDD, apply the ORNAMEC. Effective dallisgrass control will only be obtained in this GDD range.

Date	Max Temp	Min Temp	Average	Subtract 50	Daily GDD	Total GDD
Day 1	75	45	60	10	10	10

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

PESTICIDE STORAGE: Store in original container only. Keep container closed when not in use. Do not store near food or feed. In case of spill or leak on floor or paved surfaces, soak up with sand, earth or synthetic absorbent. Remove to chemical waste area.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

For Plastic Containers – Nonrefillable with capacities equal to or less than 5 gallons:

Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.
