2-D

Post-Emergent Herbicide

Dual powered post-emergent herbicide for tough broadleaf weed problems in established cool and warm season non-residential turfgrass. A single application delivers eight to twelve weeks of truly reliable control of dandelion, oxalis, clover and other difficult to control weeds.

- Dynamic combination of triclopyr and clopyralid provides to the root control of 35 broadleaf weed species
- A single application provides long-lasting, broad-spectrum control that helps eliminate repeat treatments
- Labeled for use on a wide variety of cool and warm season turfgrass with a low-odor formulation that's excellent for commercial and public applications

Formulation A non-phenoxy post-emergent liquid

Active Ingredient Triclopyr and Clopyralid

Competitive Brand Dow AgroSciences Confront®

Packaging 4 x 1 gallon bottles

Application Rates See label for specific uses and rates

Mode of Action Post-emergence selective systemic broadleaf herbicide which controls target weeds by mimicking the plant hormone auxin causing uncontrolled plant growth.
