Liquid Activated  
Compound Disc  
Tablets

Beverage Tray  
DEFENDER  
Is a Preventive  
Maintenance  
That Will Treat  
the Drain Lines  
24/7.

An often overlooked area in an operation is a soda fountain machine tap dispenser, and in particular, the associated tray area and drain lines. Although seemingly harmless, until they are sanitized properly, the dispenser tray and drain lines regularly become a breeding ground for the growth of fruit flies, as well as cold water mold and clogged drain lines.

Until now, the general remedy comprised of a constant flushing with caustic chemicals and/or hot water. Now, with the innovation of Beverage Tray DEFENDER, the beverage tray and subsequent drain lines are treated 24/7.

Simply place an all-natural, eco-friendly Beverage Tray DEFENDER proprietary disc tablet beneath the beverage tray grating and the disc will activate with normal operation and without any special attention. This will eradicate the problematic cold water mold issues, clogged drain lines and fruit flies.
