

# EVAC™

## Botanical Rodent Repellent

### DESCRIPTION

EVAC is an EPA-registered product made with balsam fir oil as the active ingredient and fragrance oil and plant fibers to comprise the remaining formulation. The product has a strong pine-like aroma that has been proven to be repellant to rodents. It comes in a granular form packaged in 2.5 ounce pouches. EVAC is considered a reduced-risk “green” biologically-based product that requires no signal word such as “Caution”.

### PRODUCT APPLICATION

EVAC works on the olfactory senses of rodents. They find the strong pine-like scent offensive and try to avoid the area where the product pouch is located. In some situations it may not totally expel resident rodent populations once they have created well-established nests because maternal instincts appear to keep the rodents confined inside their nests and may prevent them from leaving the area. The product works very well to prevent the establishment of new rodent nests (or reestablishment after normal control measures) in a structural area. Research studies have shown that EVAC can prevent the potential infestations or re-infestations of rodent populations by as much as 68-80% when applied according to label instructions. EVAC fits very well into a green IPM program when applied in conjunction with the elimination of food and habitat and with exclusion techniques

*Use EVAC in attics.*

In confined areas such as attics, you would apply one pouch per 8 square feet to keep rodents from establishing nests in insulation, etc. Also apply a pouch to entry points were rodents might have access to an area.

*To protect entry points, place EVAC in crawl space vents and inside shed and garage doors.*

A pouch could be placed in a vent opening of a crawl space and in unrepaired holes in foundation walls. Apply beside doors in garages, sheds and outbuildings where rodents might gain access. EVAC can also be placed into woodpiles and wood storage areas.

*EVAC can be used to repel rodents in woodpiles & woodsheds (top), storage units, RVs and boats.*

EVAC is perfect to protect against potential infestations in motor homes, campers and boats in storage to keep rodents from establishing nests and causing damage to areas such as wiring and upholstery.

EVAC can be used to protect storage facilities and rental storage units from invasion and establishment of nests by rodents.

Use gloves to handle and apply packets to avoid getting the aroma on your hands. The strong aroma can be also somewhat overpowering to some individuals, so do not apply packets into areas of a structure that are regularly occupied.
