

# Lo-Line Monitor

## COCKROACH TRAP & INSECT MONITOR

Unlike competitors that put attractant in their glue, B&G uses a new highly proprietary process that actually applies a layer of attractant before the glue is applied. This provides the highest level of attraction to the insect.

- » Large trap with a low profile, fits under tables, and in confined spaces
- » Design prevents cockroaches and insects from escaping
- » Ideal as monitor in IPM programs
- » Highly effective glue for positive catch rates
- » Food based attractant is safe yet very effective for all insects including cockroaches, silverfish, spiders, centipedes and earwigs.

**The Lo-Line can function as a control tool when used at infested areas and harborages. This specialized use of Lo-Line traps can meet the needs of facilities that require or benefit from a pesticide-free control program. These facilities include schools, offices, health-care facilities, kitchens and restaurants.**

- » Good for all species of cockroaches and other crawling insects
- » Food-based attractant applied below the entire glue surface
- » Large trap with low profile, fits in small spaces, out of sight
- » Use in sensitive accounts where use of insecticides is limited or prohibited.
- » Use to control or eliminate small infestations, or as a monitor to locate pest harborages
- » Promotes "Green" pest control
- » Great for IPM programs
- » Call for a free sample pack: 800-544-8811
