

LIPHATECH®

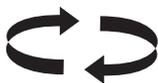

Quality Liphatech Products Quick Guide

Featuring our comprehensive line of Aegis®
high-performance stations and effective baits.

Instructions

STEP 1 >>>

Unlocking the lid

- Insert key in lock.
- Apply very little pressure.
- Turn 180 degrees.
- Repeat for second lock (all models, except mouse).

Abriendo la tapa

- Insere la llave en la parte movable de la cerradura.
- Presione levemente en la llave.
- Dé una vuelta de 180 grados.
- Repita lo mismo para la segunda cerradura (todos los modelos, excepto ratón).

Ouvrir le couvercle

- Insérer la clef dans la serrure.
- Appuyer légèrement.
- Donner 1 tour de clef de 180 degrés.
- Répéter la même opération pour la 2ème serrure (tous les modèles excepté souris).

STEP 2 >>>

Installing bait rods or SST devices

- Snap or press vertical rods into sockets. Press bait tray over rods, forcing them through.
- For horizontal rods, place bait tray, then align rods with slots above.
- For SoftSecure™ Technology (SST) devices, place bait tray before inserting SST with curved end facing out.

Instalación de barras o dispositivos SST del cebo

- Encaje o fije las barras verticales en los huecos. Presione la bandeja del cebo sobre las barras para atravesarlas.
- Para las barras horizontales, coloque la bandeja del cebo y luego nivele con las ranuras de arriba.
- Para dispositivos SoftSecure™ Technology (SST), coloque la bandeja del cebo antes de insertar el SST con el lado curvo hacia afuera.

Installation des tiges porte-appât ou des dispositifs SST

- Enclencher les tiges verticales dans les encoches en appuyant dessus. Enfoncer la mangeoire sur les tiges jusqu'à ce qu'elles la traversent.
- Pour les tiges horizontales, placer la mangeoire, puis aligner les tiges sur les fentes supérieures.
- Pour les dispositifs SoftSecure^{MD} Technology (SST), placer la mangeoire avec l'extrémité courbe à l'extérieur avant d'insérer le dispositif SST.

STEP 3 >>>

Securing bait

Skewer blocks or soft bait on vertical or horizontal bait rods, or place on the SST device.

In freezing temperatures, soft bait hardens. Cup the pouch in one hand and pierce it with the rod.

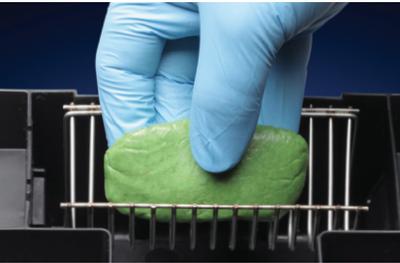

Clip place packs to horizontal rod with "binder" paper clips.

Asegurar el cebo

Atraviese el cebo blando o en bloque en las barras del cebo verticales u horizontales, o colóquelo en el dispositivo SST.

En bajas temperaturas, el cebo blando se endurece. Sostenga la bolsa en su mano y atravesarlo con la barra.

Sujete las bolsas a las barras horizontales con clips para "encuadración".

Fixation de l'appât

Enfiler les blocs ou appâts mous sur les tiges verticales ou horizontales, ou les placer sur le dispositif SST.

Les appâts mous peuvent durcir si la température descend au-dessous de zéro. Assouplir le sachet et le percer en l'enfilant sur la tige.

Maintenir les sachets sur la tige horizontale grâce aux pinces prévues à cet effet.

STEP 4 >>>

Locking the device

Press firmly on both locks, if applicable, until they "click."

Cerrando el dispositivo

Presione firmemente en ambas trabas, de ser posible, hasta escuchar que haga clic.

Verrouillage du dispositif

Appuyer fermement jusqu'au clic.

Baits

FirstStrike®

- Second-generation anticoagulant rodenticide, Liphatech exclusive active ingredient: difethialone.
- High acceptance by rodents, even when competing food is available.
- Can be secured in a tamper-resistant bait station.
- Wax-free formula won't melt in hot temperatures.
- Ideal for combating lingering rodents, tough infestations or for everyday use.

Resolv®

- Second-generation anticoagulant rodenticide, Liphatech invented active ingredient: bromadiolone.
- Most commonly used AI in a superior formulation.
- Does not contain wax, for greater performance.
- Wax-free formula won't melt in hot temperatures.
- Overcome resistance and bait shyness concerns.

TakeDown™

- Acute rodenticide, active ingredient: bromethalin.
- Effective for heavy infestations, especially in commercial settings.
- Faster results than anticoagulant rodenticides.
- Wax-free formula won't melt in hot temperatures.
- Power of an acute rodenticide with the palatability of soft bait.

Generation®

- Second-generation anticoagulant rodenticide, Liphatech exclusive active ingredient: difethialone.
- Low cost-per-placement.
- Quick population knock down for superior control of rats and mice.
- Combined with food-grade grains for maximum palatability.

BlueMax[™]

- Second-generation anticoagulant rodenticide, Liphatech exclusive active ingredient: difethialone.
- Superior durability for sensitive/audited accounts.
- Maximum block durability for easy bait station clean-up.
- Maximum weatherability for the toughest baiting conditions.
- Unique preservatives for maximum mold prevention.

Maki[®]

- Second-generation anticoagulant rodenticide, Liphatech invented active ingredient: bromadiolone.
- 1 lb. bait size holds up well in sewers.
- Paraffinized pellets resist moisture in Norway rat burrows.

Rozol[®]

- Multi-feed anticoagulant, Liphatech invented active ingredient: chlorophacinone.
- Tracking powder for areas inaccessible to non-targets.
- Restricted Use Pesticide.

NoTox[™]

- Blocks do not contain an active ingredient.
- Low cost-per-placement.
- Inspect bait regularly for signs of activity; replace with toxic bait or traps until no signs of rodent activity occur.

Stations

SoftSecure™ Technology

- Rodenticide placement device.
- Ideal for soft bait and works with traditional bait blocks.
- Compatible with most bait stations.
- No bait rod hassles.

Aegis®-RP

- Straight-through entry/exit design promotes maximum feeding and rodent control.
- Opens away from the wall, creating a convenient surface for recording data.
- Horizontal or vertical mounting for versatility.
- Holds baits, traps or glue boards.
- Gray station for lower internal temperatures or industrial placement.

Aegis®-RP Anchor

- Available in black and gray with an integrated concrete block.
- Two bolts embedded into concrete.
- Great looking professional design.
- Pre-assembled station eliminates set-up hassle and costs.
- Install either horizontally or vertically.

Aegis® Mouse

- Straight-through entry/exit design promotes maximum feeding and rodent control.
- Twice the capacity of most mouse stations.
- Fast to service; use same key as other Aegis products.
- SecurePoint™ Technology holds bait securely in station.
- Clear lid version for indoor use only.

Aegis® Rat

- Straight-through entry/exit design promotes maximum feeding and rodent control.
- Clear lid makes bait monitoring easy and efficient.
- Clear lid version for indoor use only.
- White cool box station lowers internal temperature.

Aegis® Modular

- Multi-functional system allows for baiting, trapping and monitoring.
- Opens away from wall, providing a convenient recording surface.

*Do not remove the bait station lid as hinge damage may occur.
If the bait station is to be used in extremely cold temperatures,
please assemble it at room temperature first.*

As the Soft Bait Innovators™, Liphatech is ready to solve your toughest rodent control problems with our extensive line of bait stations and rodenticides.

Finding the most effective and efficient solutions for the world's rodent control problems — and helping our customers succeed — has made Liphatech, Inc. the industry leader in innovation.

To enhance your IPM program for your specific situation, call our experienced and knowledgeable customer service staff at 888-331-7900 or visit www.liphatech.com.
