SUPERIOR PRODUCTS FROM THE WORLD LEADER IN RODENT CONTROL

As the world leader in rodent control technology, Bell Laboratories continues to provide leadership and stewardship for the rodent control segment of the pest control industry. Our focus is on quality, functionality and innovation.

Whether it is the development and production of innovative rodent control products, being at the forefront of regulatory issues, or developing new revenue opportunities for PMPs (such as providing rodent service for certified organic facilities using Terad₃Ag or residential baiting with the T1 Mouse), Bell is committed to supporting the pest control industry.

PROTECTA TAMPER-RESISTANT BAIT STATIONS

From the toughest to most discreet baiting requirements, Bell offers PMPs a choice of versatile tamper-resistant bait stations and anchoring systems to fit any situation.

UNIQUE RODENTICIDE BAIT FORMULATIONS

Bell Laboratories' complete line of rodenticides represents the widest range of rodent baits available anywhere. Bell's rodenticides contain only the high quality inert ingredients for maximum results. Bell's overall palatability and efficacy are proven in both laboratory and field settings.

TRAPPER GLUE AND MECHANICAL TRAPS

Bell has applied its vast knowledge of rodent behavior and engineering savvy into the development of an array of mechanical and adhesive trapping alternatives. Bell's glue formulations are the result of substantial research and testing to determine the ideal combination of immediate grip and stretchable hold, the two factors needed for the highest possible capture rate.

TALPIRID MOLE BAIT AND MOLE TRAP

TALPIRID Mole Bait is a one-of-a-kind product that was developed after years of groundbreaking research. It is the first mole bait of its type designed, developed and scientifically proven to kill moles.

TALPIRID Mole Trap incorporates the latest in mole trap technology. Built to withstand any soil type, it is the ideal complement to a complete TALPIRID program.

MANUFACTURING FACILITY

Bell is a vertically integrated manufacturing company. All of Bell's products are designed, tested and manufactured in its modern facility in Madison, Wis., which houses its manufacturing operation, offices, and biological and chemical testing laboratories.

ENVIRONMENTAL STEWARDSHIP

Bell continues to work with conservation groups and government agencies around the world to rid ecosystems of invasive species and restore the balance of nature.

GET THE **LUMITRACK® ADVANTAGE**

What is Lumitrack®?

It's a special additive that is incorporated into a rodenticide that makes the bait glow bright green when exposed to UV light. After rodents consume the bait, their feces will glow bright green under black light.

How will I benefit from using Lumitrack®?

FAST.

Lumitrack helps you quickly and easily identify droppings, especially in dark or hard-to-see conditions. Droppings can determine species type, size of the infestation, and establish high activity areas.

EFFICIENT.

Lumitrack will improve your baiting strategy. It will reveal the nesting areas and pathways of rodents which will allow you to place your bait more efficiently and skillfully in areas with the most rodent traffic.

ACCURATE.

Lumitrack aids in the early identification of an infestation. You will be able to more accurately inspect inbound pallets because the visibility of droppings will be enhanced.

FEWER CALLBACKS.

CHOOSING THE RIGHT BAIT

CONTRAC® CONTRAC® WITH LUMITRACK®

ACTIVE: **Bromadiolone**

TYPE:
Second generation
anticoagulant

ANTIDOTE*:
Vitamin K₁
treatment

GENERAL ATTRIBUTES:

- Rodents can ingest a toxic dose in a single feeding
- Rodents may continue to consume the bait even after ingesting a toxic dose

WHEN TO USE:

- For heavy infestations where there is strong food competition
- To control persistent infestations
- For occasional invaders to ensure they ingest a lethal dose in a single feeding

FINAL® FORMUS®

ACTIVE: **Brodifacoum**

TYPE:
Second generation
anticoagulant

ANTIDOTE*:
Vitamin K₁
treatment

GENERAL ATTRIBUTES:

- Rodents can ingest a lethal dose in a single feeding
- Rodents may continue to consume the bait even after ingesting a toxic dose
- Higher toxicity than CONTRAC® baits

WHEN TO USE:

- For heavy infestations where there is strong food competition
- To control persistent infestations

FASTRAC®

ACTIVE: **Bromethalin**

TYPE:
Acute

ANTIDOTE*:
There is no direct
antidote, however
there are treatment
programs available for
sublethal ingestions

GENERAL ATTRIBUTES:

- Norway rats, roof rats and house mice cease feeding after consuming a toxic dose
- Bait quantity may be about one-third that used with anticoagulants
- Kills faster than anticoagulants

WHEN TO USE:

- Ideal for new accounts
- Knocks the population down to a manageable level

The level of rodent activity determines the appropriate bait for the job. It may be a new account with a heavy infestation, an existing account with persistent rodent activity, or a preventative program set up to monitor and keep rodents out. Proper selection and application of these baits will determine the success of the Rodent Control Program.

DITRAC[®] LIQUA-TOX[®] II

ACTIVE: **Diphacinone**

TYPE:

First generation anticoagulant

GENERAL ATTRIBUTES:

- Multiple feedings typically required for the anticoagulant to be effective
- Generally more bait needs to be consumed to reach a toxic dose
- Less toxic than second generation products

ANTIDOTE*:

Vitamin K₁ treatment

WHEN TO USE:

- Great for maintaining control once population is restrained
- For monitoring any new activity

TERAD₃[®] TERAD₃[®] AG

ACTIVE: **Vitamin D₃**

TYPE:

Acute

GENERAL ATTRIBUTES:

- OMRI listed (Terad₃Ag)
- First EPA registered rodenticide for use in organic production
- Kills anticoagulant-resistant Norway rats

ANTIDOTE*:

There is no direct antidote, however there are treatment programs available for sub-lethal ingestions

WHEN TO USE:

- For use in organic production (Terad₃Ag) and structural control (Terad₃)

ZP[®] ZP[®] AG

ACTIVE: **Zinc Phosphide**

FOR MICE

FOR FIELD RODENTS

TYPE:

Acute

GENERAL ATTRIBUTES:

- Restricted use product
- Proven palatability

ANTIDOTE*:

There is no direct antidote, however there are treatment programs available for sub-lethal ingestions

WHEN TO USE:

- For economical cleanout of rodent infestations
- Use tracking powder when competing with natural food sources
