

HYDRATRAIL™

Termite Protection  Adjuvant System

YOUR NEW LINE OF DEFENSE

Termite **Guiding Technology**
Directs the wood-seeking termites
into detection zone

SAFE AND BIODEGRADABLE

3 Months Protection

HELPS TO CREATE A TERMITE DETECTION ZONE

Proven Effectiveness for:

Subterranean Termites
Eastern Subtermites
Formosan Termites

**FOR USE WITH
TERMITE MONITORS**

**2X FASTER
DETECTION**

**CONNECT THE DETECTION STATIONS
FOR MAXIMUM EFFECTIVENESS**

HYDRATRAIL™

Termite Protection Adjuvant System

Termite **Guiding Technology**

Directs the wood-seeking termites into detection zone

**HOW IT WORKS: Connect the Stations
Application for Continuous Protection**

- Directs termites away from structures and into termite monitor stations
- Reduces the time for termites to discover monitor stations
- “Connect the Stations” application for continuous detection between termite monitor stations installed around structures
- Improves detection of termite infestations
- **Aggregates water in limited areas, forming a Hydrotrail that effectively directs foraging and wood-seeking termites**
- Proven efficacy for Eastern Subterranean and Formosan termites

90-day persistence in soil

Biodegradable

No digging / trenching required

Easy to Use

**2X FASTER
DETECTION**

HYDR^oTRAIL™

Termite Protection Adjuvant System

Termite **Guiding Technology**

Directs the wood-seeking termites into detection zone

TESTIMONIALS

"After conducting field trials and reviewing laboratory research, I saw a lot of potential for HydroTrail to improve bait performance and to protect structures. The HydroTrail Detect and Direct System can be a game changer for termite treatments."

*Paul Hardy, retired
Director of Technical Services, Orkin Exterminating*

"We investigated HydroTrail and termite monitors in our University of Florida Urban Entomology Laboratory and in the field. HydroTrail effectively links the space between monitor stations so termites trail to stations rather than possibly foraging between stations to damage the structure."

*Phil Koehler, PhD Professor Emeritus
University of Florida, Department of Entomology*

"When my laboratory discovered a chemical that termites would follow, I knew we had a way to manage their behavior; a way to direct them away from the home and toward their demise."

Dr. Gregg Henderson, PhD LSU Urban Entomologist, Emeritus

"As a early user of HydroTrail, I've been able to share with other pest professionals how HydroTrail helped termites find installed monitoring stations that hadn't had any previous activity. I'm excited to see this emerging technology improve termite detection and grow revenue."

*Dr. Claude Thomas, PhD Entomology,
Lindsey Pest Services, Jacksonville, Florida*
