

SureKill® Roach Gel Bait

Product Number: 9204040

SureKill Roach Gel Bait	Product Number
Blister pack 4 x 40 g cartridges	9204040

Product Description

SureKill® Roach Gel Bait features a dual-action Imidacloprid active providing quick results with primary and secondary control. This unique bait matrix allows for vertical treatments with staying palatable for extended periods.

Purpose

SureKill Roach Gel Bait provides control of cockroaches within indoor and outdoor environments of residential, commercial, and food handling establishments.

Benefits

- Higher concentration of Bitrex than competitive gel baits to prevent accidental human consumption
- Features a delayed reaction of imidacloprid with a treatment of active ingredient. Delay eliminates link between ingestion and symptoms, eliminating pheromone release alarming other roaches to not consume the bait.
- Hygroscopic characteristics to keep moist and fresh longer than other gel baits
- Long lasting residual for extended control of roaches
- High cohesion and adhesion properties for precise placement

Please see this product's entire label and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on the product label. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

SureKill® Ant Gel Bait

Product Number: 9304040

SureKill Ant Gel Bait	Product Number
Blister pack 4 x 40 g cartridges	9304040

Product Description

SureKill® Ant Gel Bait features a dual-action Imidacloprid active providing quick results with primary and secondary control. This unique bait matrix allows for vertical treatments with staying palatable for extended periods.

Purpose

SureKill Ant Gel Bait provides control of ants within indoor and outdoor environments of residential, commercial, and food handling establishments.

Benefits

- Higher concentration of Bitrex than competitive gel baits to prevent accidental human consumption
- Takes advantage of trophallaxis (food sharing) that occurs in the ant colony. Efficiently spreads throughout the colony before it begins to act on carrier ants.
- Bait attraction shown to be superior to honey
- Balanced sugars and proteins to attract different types of ants
- Viscosity and texture allows ants to be able to bite or suck the bait, targeting a wider range of ant species.
- High cohesion and adhesion properties allowing for vertical application
